[Accessing NDIS data](#)

[Making a research request](#)

[Current partnerships and approved requests](#)

The NDIA is committed to supporting researchers and developing partnerships with academic institutions and research bodies to drive and shape the disability research agenda.

Services we offer on request include:

- Access to tailored NDIS data (summary or unit record data)
- Access to NDIA staff (employees, contractors and volunteers) as:
  - study subjects in research; or
  - project team members, steering committee experts, working parties or similar
- Collaboration or partnership on research or evaluation

For more information, please refer to the External Researcher Request Policy:

- [External Researcher Request Policy \(PDF 760KB\)](#)
- [External Researcher Request Policy \(DOCX 890KB\)](#)

## Accessing NDIS data

The NDIA has data publicly available on our [Data and insights](#) page.

For information about NDIS data sharing for research, please review the [NDIS Public Data Sharing Policy](#).

This document explains:

- the type of data we share
- what data is not available
- the principles of NDIS data
- why data sharing is important
- how to gain access to NDIS data

If you are requesting access to tailored data (summary or unit record data), see information below on how to make a request. If you are requesting unit record data, please also read the cyber security requirements:

- [Information about Cyber Security requirements \(PDF 314KB\)](#)
- [Information about Cyber Security requirements \(DOCX 48KB\)](#)

## Making a research request

For access to tailored summary-level NDIS data:

- [External Research Request Form – Short Version \(DOCX 795KB\)](#)

For access to tailored unit record NDIS data, NDIA staff, or to request a collaboration or partnership with the NDIA:

- [External Research Request Form – Long Version \(DOCX 818KB\)](#)

Your duties as a researcher:

- Follow the [Australian Code for the Responsible Conduct of Research](#) and the [National Statement on Ethical Conduct in Human Research](#) .
- Make sure all data and information is used confidentially so that privacy is maintained according to the Privacy Act 1988 (Cth).
- Other than information in the public domain, you do not disclose—except to the NDIA—any confidential information relating to the Agreement or the Research Project without written approval from the NDIA.
- Ensure all required ethical, administrative and governmental approvals relating to the Research Project are in place before commencing. These approvals must be provided to the NDIA upon request.
- Provide a Final Project Closure Report to the NDIA on completion.

For more information on the use of NDIA tailored data, please read our full terms and conditions:

- [Terms and conditions for the provision of aggregated or summary data for the purposes of research \(PDF 712 KB\)](#)
- [Terms and conditions for the provision of aggregated or summary data for the purposes of research \(DOCX 185KB\)](#)

## Current partnerships and approved requests

Approved external research requests are listed in the summary log:

- [Research requests summary log \(DOCX 53KB\)](#)
- [Research requests summary log \(PDF 135KB\)](#)

Below is a list of some of our current collaborations with academic institutions and research bodies:

## **TRANSMIT Study: Multifaceted knowledge TRANSlation iMproving function in Cerebral Palsy:**

- Cerebral Palsy Alliance and the University of Sydney are leading this project and will develop a resource to improve outcomes for children living with cerebral palsy. The TRANSMIT project is funded through the National Health and Medical Research Council (NHMRC) Partnerships for Better Health. This project will develop a mobile health aid that will help parents and carers of children living with cerebral palsy to better understand and access evidence-based supports.

## **Understanding the population health, and health service needs of people with neuropsychiatric disorders:**

- University of New South Wales Sydney are leading this large data project focused on people with neuropsychiatric conditions. The project will explore health profiles, risk factors, as well as health interventions, such as services, treatments, costs, programs and policies, including for prevention. The project aims to build a better understanding of neuropsychiatric disorders and will provide information to support the improvement of services for individuals with neuropsychiatric disorders.

## **KeE (Key-eLearning-Early Diagnosis): A randomised controlled trial of adaptive eLearning and virtual patient simulation for early diagnosis of cerebral palsy:**

- University of Sydney are leading this trial and will test the effectiveness of two innovative e-learning modules using virtual patients and continuous assessment on physician practices (to diagnose Cerebral Palsy accurately and early, effectively communicate the diagnosis of Cerebral Palsy to parents, and facilitate early access requests to early intervention). This research aims to enhance best practice, early intervention and parent support to improve outcomes for infants and their families. This project is partly funded by the Cerebral Palsy Alliance and postgraduate scholarships.

---

## **Mapping Participation - An analysis of Specialist Disability Accommodation (SDA) data in Australia:**

- University of Technology Sydney are conducting this research to understand what types of SDA have been built across Australia and the locations of those SDA properties in relation to things such as transport, greenspace, services, entertainment and shops. The research findings will provide important information in the move towards greater inclusion and participation of people with disability in the community. This project is funded by the Achieve Foundation.

## **Bridging the Digital Divide: Building Health Self-Efficacy through Communication-Accessible Online Environments:**

- University of Queensland is leading this project and will develop technology, training and guidelines that make the internet more accessible to people with communication disability. This project aims to reduce the barriers to internet based essential health and support services for people with disability. This project is funded by the Medical Research Future Fund.
